

# CERTIFICATE OF PROFICIENCY FOR USING SILVER DIAMINE FLUORIDE IN GENERAL DENTAL PRACTICE

Sponsored by SDI and BADT

## HANDS ON VIRTUAL WEBINAR

Professor Raman Bedi will lead the course

**CPD Certificate of proficiency awarded by BADT**

**Hands on materials sent to delegates**

**How to introduce SDF into general practice**

- what to charge
- Consent issues
- Clinical indications

### BOOKING

via [www.badt.org.uk](http://www.badt.org.uk)

**19th October 2021 @ 7.30 pm** [90 mins]

Or **16th November 2021 @ 7.30 pm** [90 mins]

Dentists: £105

DCP: £80

BADT members: £70

*20% of delegate fees given for SDF training in low income countries*

**Professor Raman Bedi** was Chief Dental Officer England from October 2002 to October 2005. Professor Bedi was an NHS consultant in Paediatric Dentistry for over 15 years. He specialises in young children with extensive caries and especially those that require full mouth reconstruction under General Anaesthesia. His focus is upon early childhood caries. Professor Bedi is the paediatric clinical lead for the Harley Street Dental Clinic. He is chair of the charity the Global Child Dental Fund and each year leads an international senior dental leadership programme which is a partnership between King's College London and Harvard University. In the past ten years over 200 senior dentists have trained on the SDL.

### COURSE SUMMARY / DESCRIPTION

Taking care of patients (in your practice) can be challenging at the best of times. Now throw a little global pandemic into the mix and things get really interesting. In this online lecture and hands on workshop, Professor Raman Bedi will cover everything from caries arrest, interim repair to definitive restorations.

Caries arrest treatments and minimally invasive management of dental caries for paediatric patients have been proven effective in many clinical situations. Now focus has turned to these treatment modalities as they can be accomplished, quickly and effectively and often without use of any handpiece at all.

You will learn about silver diamine fluoride / potassium iodide, and glass ionomer restorative materials, and composite resin and how to use these tools both individually and together to help manage your paediatric and adult patient population. You will be able to complete this 1.5 hour course/webinar in the comfort of your own operatory.

Certain pre-requisite equipment will be required. A complete kit of materials will be provided. Instruction will take place online and opportunity to interact with the instructor will be available. Learn how to care for and keep patients in your practice.

You've heard it before  
- treat your existing patients well and your practice will soar.

### LEARNING OBJECTIVES

- To discuss how to use SDF for NHS and fee-paying patients
- Understand how glass ionomers play an important role in minimally invasive dentistry.
- Use caries arrest medicaments together with a variety of restorative materials.
- Practical guidelines for clinicians/ on the medico legal aspects of providing treatments with silver diamine fluoride (SDF).
- Learn how to be remunerated for providing treatments with SDF
